

LineStretch One

The universal usable machine

The new Way
of Wrapping

Fix. Wrap. Pack.

Machine description

We would like to introduce the market to the newest addition in our portfolio, which complements our current winding machines. **A true innovation: The LineStretch One.**

Machine use:

Wrapping machines are used in the industry for the application of a protective material, which guards against corrosion or transport damage. Furthermore the material can also be used in the commissioning process of multiple items. Some of the machines currently available on the market for this sector are working at their absolute limit. Unsuitable product dimensions and geometry as well as customer requirements demand the availability of new technology.

The technology offered by the LineStretch One is no longer confined to predetermined winding paths as can be found in a Ring- or Shuttle system.

The LineStretch One has two linear systems positioned opposite each other. The axes of the linear-system travel in both horizontal and vertical directions. A gripper is mounted on both systems which enables the handing over of the roll material from one system to the other.

The result of which is a system capable of transporting the wrapping-material-roll along **freely defined paths** around or through the product, in spite of the linear axes reaching its boundary of travel.

The main area of use for the LineStretch One is in the Steel, Aluminium, Plastic and Cable industries with focus being placed on all industrial branches which manufacture coils, slit strip coils and bundles.

Coil processing and slit strip coils (**wrapping through core of roll**), also possible with small core diameters
Wrapping of wide, flat and small products

The execution of the linear system is individually adjusted to suit the project requirements

Applications and areas of use

Wrapping materials such as Stretch- and VCI Films, Nonwovens and Crepe paper

Integration into every production line in accordance with your wishes

Complete solutions including transport- and handling technology for your packaging needs

Adjustment of the material path (wrapping) of the different product formats

Wrapping possibilities for upright products plus solutions for their transport

Our individual solutions for your branch:

- ✓ Technical advice and project support
- ✓ Machine design
- ✓ Control development
- ✓ PLC-programming
- ✓ Machine manufacture and installation
- ✓ Delivery, Commissioning and Instruction
- ✓ Reliable, quick service and spare part supplies

All machines from Wrapsolut can be used inline. More info under www.wrapsolut.de
